

KAIRO TEMPLATE

Kairo template is crafted with a lot of care, but in case you find something unsatisfactory please do contact me by commenting on the product.

If you were satisfied with this product, please do remember to rate the product 5 star.

Thank you for purchasing my theme. If you have any questions that are beyond the scope of this help file, please feel free to email via my user page contact form [here](#). Thanks so much!

Description

Kairo (the Japanese word for "circuit") is the premier startup and app developer template designed to forge connections with your clients. It is built with the Nuxt 3 framework and powered by Vue 3 JS, featuring an easily customizable particle graphic background and code. If you're a startup or an app developer in search of an instantly deployable template, this is the perfect choice for you!

I believe all the necessary files have been provided. However, if you think something is missing, please feel free to comment about it, and I will reply as soon as possible.

Note

This template is based on Vue 3 and utilizes the Nuxt 3 framework. It is not compatible with WordPress/PHP, nor can it be used as a static HTML template.

Features

1. Built with Latest Stable Vue 3 JS (version 3.4+)
2. Built with Latest Stable Nuxt 3 framework (version 3.10+)
3. Built with Tailwind CSS fully optimized by [@nuxtjs/tailwindcss](#), includes [Typography plugin](#)
4. Optimized images with responsive resizing, webp or avif conversion and automatic size optimization by [@nuxt/image](#)

5. Integrated with Complete SEO solution
by [@nuxtjs/seo](#) - providing Schema JSON+LD, dynamic OG Image generation, Sitemap generation, robots.txt, and etc.
6. Integrated with web optimized [200,000+](#) ready to use vector icons, based on [Iconify](#) provided by [Icon plugin](#)
7. Attractive Fully Customizable Particle Graphics (3 presets included) by [tsparticles](#)
8. Fully Responsive, with image resizing based on display width
9. Comments in code for instant help and references
10. Easy to customize, fresh and clean code
11. Fade on scroll animation by [AOS](#)
12. Smooth scroll effect by [Lenis](#)
13. Documentation PDF Included
14. Optional Google Analytics integration included
15. Future Updates

What You Get

- fully functional, properly structured Nuxt 3 project
- .vue files
- .js files
- .scss files
- .env example
- configuration files (.npmrc, .nvmrc, tailwind.config.js, tsconfig.json, yarn.lock)
- deployment files (netlify.toml and vercel.json)
- documentation

Demo

[Vercel Demo](#) and [Netlify Demo](#)

Folder Structure

The project structure is as follows:

📁 assets	4,278	2,016
📁 components	16,000	4,030
📁 composables	4,477	1,521
📁 data	34,015	7,859
📁 layouts	160	106
📁 pages	46,701	11,878
📁 plugins	1,720	963
📁 public	177,133	168,912
📁 server	49	49
📄 .env.example	572	239
📄 .gitignore	211	151
📄 .npmrc	21	21
📄 .nvmrc	8	8
📄 app.vue	378	166
📄 error.vue	963	430
📄 netlify.toml	743	454
typescript nuxt.config.ts	3,413	1,256
green package.json	3,092	742
📄 README.md	2,043	992
📄 tailwind.config.js	411	186
green tsconfig.json	94	81
green vercel.json	372	193
📄 yarn.lock	403,789	161,245

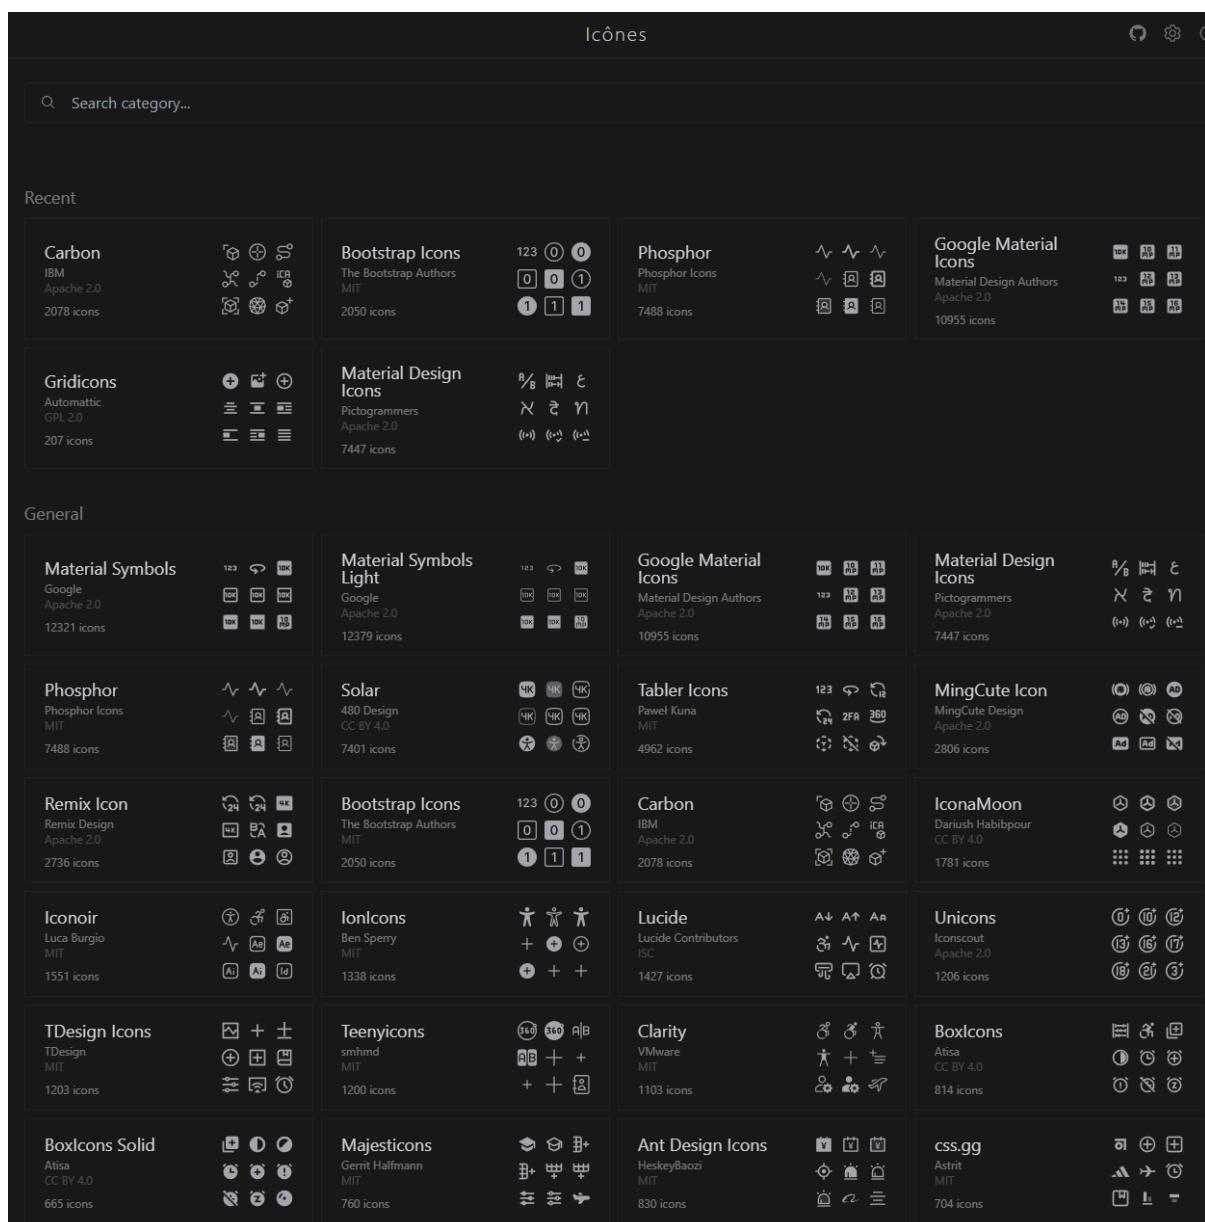

The structure follows standard Nuxt 3 Framework Project structure.

You can read more about the structure in [Official Documentation](#).

Icons

This project uses Iconify based [Icon Gallery](#) which is a combination of all major icon gallery like Font Awesome, Material Design Icons and more - creating a huge collection of more than 200,000 icons, all available at your fingertips with just one package, fully web optimized for usage with zero configuration.

You can find code like `<Icon name="mdi:code" size="64" />` in many places of this project, which is a component exported by [Icon package](#) to help you add any icon to your project.

You can add or replace icons by searching choosing the icon from [Icon Gallery](#).

Example:

```
<Icon name="mdi:code" size="64" />
```

The icon is represented **mdi:code**.

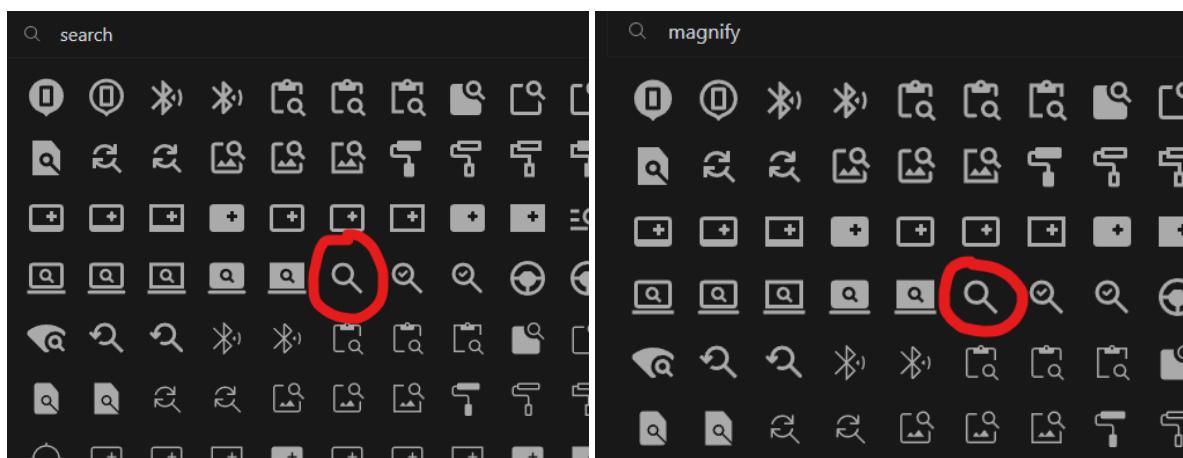

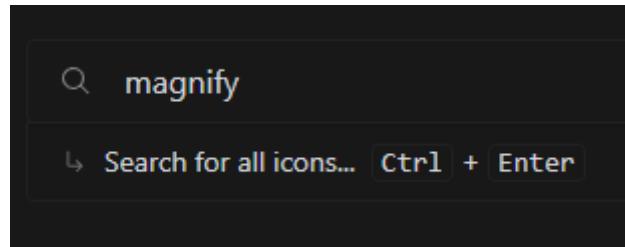

mdi is shorthand for [Material Design Icons](#).

code is an icon from this collection.

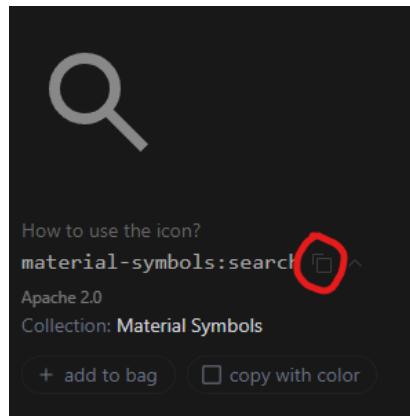

How to search?

First, either choose a collection or do a global search for icon by typing what type of icon you want.

Example, if I want an icon for search button, I will type "search" or "magnify".

Then copy the text by clicking on the copy icon as highlighted below.

The end result will look something like this:

```
<Icon name="material-symbols:search" />
```

You can read the documentation for more information:

<https://nuxt.com/modules/icon>

Why use this package?

The package is specifically created to work with Nuxt 3 and the icons used will automatically be replaced with its corresponding SVG code. The icons used on webpage are cached and hence prevents subsequent requests to the same icon from the provider. This results in maximized optimization of webpages, build times and loading time compared to all other icon framework or packages.

You can compare the results using a different package and benchmark the webpage using Lighthouse or PageSpeed. If you do find a better option do inform me too.

Project Configurations

These are few important files for configuring project before deploying:

- nuxt.config.ts
- .env
- tailwind.config.js
- tsconfig.json

[Official Nuxt 3 Documentation](#) for modifying nuxt.config.ts

All the configurations have been done considering many use cases, there are only few changes that need to be done before deployment.

.env file

First either rename file .env.example as .env or if you want to keep example file as reference copy the contents of .env.example into a new file called .env

The .env file is used for declared environment variables which will be used by the project both during runtime and for build purposes.

The environment variables are as follows:

- **NUXT_PUBLIC_SITE_URL="<http://localhost:3000>"**

Publicly accessible URL. Remember to change the URL from <http://localhost:3000> to your deployment URL.

Example:

The public URL of template deployment to Vercel is

<https://kairo-template.vercel.app/>

and hence the value should be:

NUXT_PUBLIC_SITE_URL="<https://kairo-template.vercel.app/>"

- **NUXT_INDEXABLE=true**

Set it to **true** to make your deployment discoverable by search engines.
Set it **false** to block indexing by search engines.

- **NUXT_PUBLIC_TITLE_SEPARATOR="|"**
Separator for <title> generation. The project uses useSeoMeta to add title to pages. The default format is:
<Page Title> <Separator> <Site Name>
Which for example homepage, translates to:
Home | Kairo Template
- **NUXT_PUBLIC_SITE_NAME="Kairo Template"**
Site name will be used in multiple locations for SEO. Title, Schema JSON+LD and Search engine indexing.
- **NUXT_PUBLIC_SITE_SHORTNAME="Kairo Template"**
Optional site name declaration but in shorter version. Not used anywhere yet so you can remove it if not necessary.
- **NUXT_PUBLIC_SITE_DESCRIPTION="Kairo Template"**
Description for SEO, Search Engine Indexing and Schema JSON+LD.
- **NUXT_PUBLIC_SITE_LOCALE="en"**
Declaration of site language. Useful for Seach Engine Indexing and Automatic translation.
- **Favicon**
Favicon is the icon you see at the left of browser tab.

Icon is an image usually with extension .ico, .svg or .png
You can check which all file format is supported on [Wikipedia](#).
Check the [official config documentation](#).
- **NUXT_PUBLIC_SITE_FAVICON_URL="/favicon.ico"**
- **Social Share**
Accordingly add social sharing URL which is used in Navbar and Footer.
- **NUXT_PUBLIC_SOCIAL_X_URL="#"**

NUXT_PUBLIC_SOCIAL_YOUTUBE_URL="#"

NUXT_PUBLIC_SOCIAL_GITHUB_URL="#"

NUXT_PUBLIC_SOCIAL_FACEBOOK_URL="#"

NUXT_PUBLIC_SOCIAL_DRIBBBLE_URL="#"

- **Google Analytics ID**

You can find in this [documentation](#) about getting your Analytics ID.

Example: G-XXXXXX

NUXT_PUBLIC_GOOGLE_TAG_ID=""

Setup

Local Development Setup

First Step, read the requirements below and install what is missing:

- [Node.js](#) 20 or above.
- VSCode Editor (for best results)
- Windows 10+ or Linux

Second Step, run installation for node modules:

It's recommended to use yarn for best results, also because `yarn.lock` which is used as reference for installation by `yarn` is provided.

```
yarn install
```

```
npm install
```

```
pnpm install
```

Third Step, run development server:

```
yarn dev
```

```
npm run dev
```

```
pnpm run dev
```

```
(base) [~] ~/projects/nuxt/kairo-template$ yarn dev
yarn run v1.22.19
$ nuxt dev
Nuxt 3.10.2 with Nitro 2.8.1

  → Local:  http://localhost:3000/
  → Network: use --host to expose

  i  Using html-validate to validate server-rendered HTML
  i  Using default Tailwind CSS file
    → DevTools: press Shift + Alt + D in the browser (v1.0.8)

  i  Tailwind Viewer: http://localhost:3000/\_tailwind/
  i  Vite client warmed up in 3262ms
  i  Vite server warmed up in 2028ms
  ✓ Nitro built in 1100 ms
```

If you see a similar screen as above, then that means the project is running fine and you can access it from <http://localhost:3000/>.

Setting up on Netlify or Vercel

Setting up your site on Netlify or Vercel can be the fastest way to deploy Nuxt 3 project.

As bonus, configuration files for these deployments are already present.

- netlify.toml
- vercel.json

The main advantage of using these services is:

- Nuxt friendly.
- Instant deployment, no hassle.
- Easy to use UI.
- Easy to add new projects, track logs, restart, or trigger deployment.
- Automatic deployments whenever new commit is added.
- 100% Free.
- No credit card required.
- Comes with Bandwidth and other limitations for free plan.
- Limitations reset every month.

The main advantage is - after the given bandwidth or any other limitation is reached for the month, the site is frozen until next month, so you don't have to worry about incurring charges overnight or unknowingly.

For Netlify deployment follow this documentation:

<https://docs.netlify.com/integrations/frameworks/nuxt/>

For Vercel deployment follow this documentation:

<https://vercel.com/docs/frameworks/nuxt>

You can also find other documentations, blog posts and even YouTube videos on the same topic.

People commonly miss adding environmental variables as it is very important to this project.

Remember not to add .env file in your list of files for deployment. If there are any secret keys stored in it, you could risk exposure.

The best way to add environment variables is to copy the contents of .env file to clipboard and paste them all together.

Below links show on how to add these environmental variables to your deployment.

Netlify Environment Variables:

<https://docs.netlify.com/environment-variables/overview/>

Vercel Environment Variables:

<https://vercel.com/docs/projects/environment-variables>

Production Setup

Manually deploying the site is as easy as local setup. Follow the first and second steps from [Local Development Setup](#).

Third Step, run the below command:

yarn generate

npm run generate

pnpm run generate

```
i  Running link inspections...
✓ Generated public .output/public
✓ You can preview this build using npx serve .output/public
✓ You can now deploy .output/public to any static hosting!
Done in 17.01s.
```

Fourth Step, run the following command to deploy:

npx serve .output/public

Alternatively, you run the below commands if the above command doesn't work:

yarn start

npm run start

pnpm run start

Serving!

- Local: <http://localhost:3000>
- Network: <http://172.31.100.133:3000>

Copied local address to clipboard!

Done! Now you can access the site from <http://localhost:3000/>

HTML Structure

Home Page

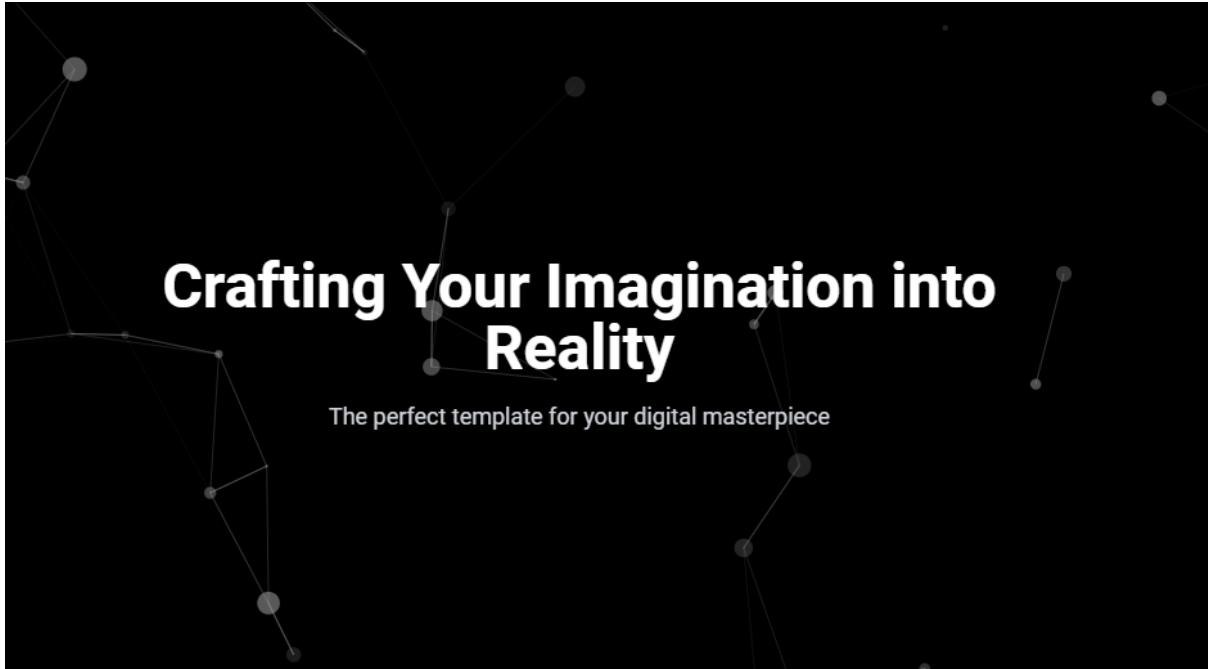

The file is /pages/index.vue

There are a total of 8 sections on the home page.

1. Hero
2. Features (Part of About section)
3. About
4. Showcase
5. Team
6. Testimonial
7. Insight
8. Contact

1. Hero

This is the very first section, which allows you to captivate the audience with a bold statement and a visually appealing background. It should always be placed at the beginning of the home page for best results.

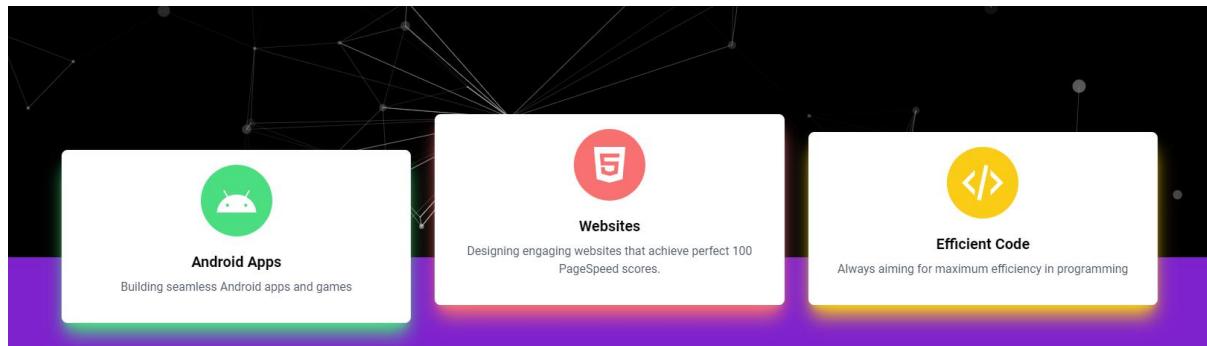

Replace the text in *line 16* and *line 19* with the title and subtitle that you think is best for representing your company or entity.

```
<div data-aos="fade-down" class="container relative mx-auto">
  <div class="items-center flex flex-wrap">
    <div class="w-full lg:w-6/12 px-4 ml-auto mr-auto text-center">
      <h1 class="text-white font-bold text-5xl">
        Crafting Your Imagination into Reality
      </h1>
      <h2 class="mt-4 text-lg text-gray-300">
        The perfect template for your digital masterpiece
      </h2>
    </div>
  </div>
</div>
```

2. Features

Following the hero section, you typically showcase your services or features. This is where you detail what you offer, such as "Android Apps," "Websites," and "Efficient Code." It's a logical next step to introduce visitors to your services right after grabbing their attention.

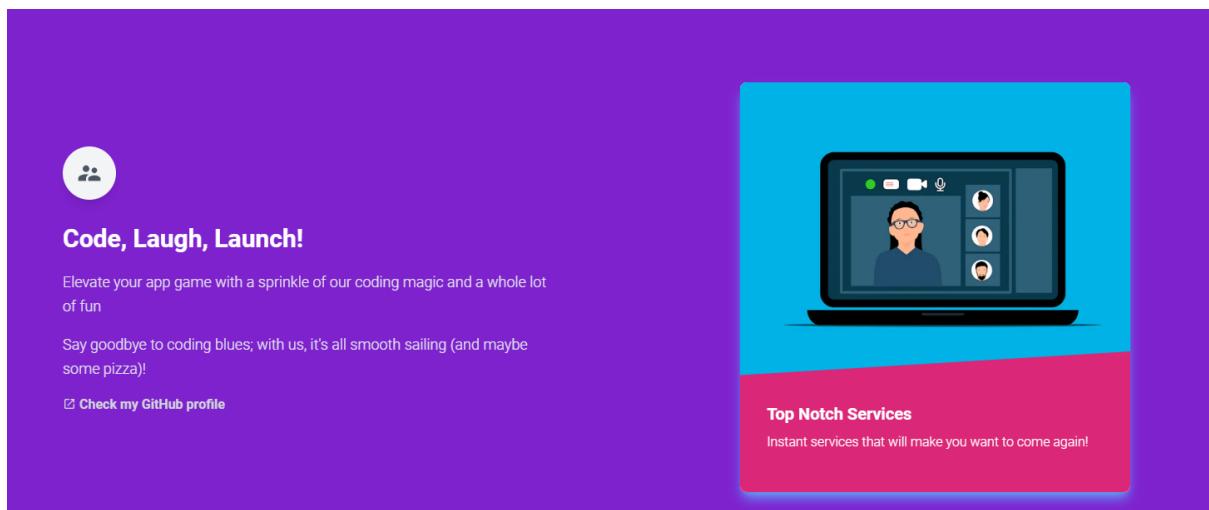

Replace the text in lines 46, 48 and lines 65, 67 and lines 85, 87.

```
<div class="lg:pt-12 pt-6 w-full md:w-4/12 px-4 text-center">
  <div
    data-aos="fade-right"
    data-aos-duration="1500"
    class="relative flex flex-col min-w-0 break-words bg-white w-full mb-8 shadow-x
  >
    <div class="px-4 py-5 flex-auto">
      <div
        class="text-white p-3 text-center inline-flex items-center justify-center w
      >
        <Icon name="mdi:android" size="64" /> ← ICON
      </div>
      <div class="text-xl font-semibold">Android</div>
      <p class="mt-2 mb-4 text-gray-600">
        Building seamless Android apps and games
      </p>
    </div>
  </div>
</div>
```

Furthermore, you can replace the Icons by referring to [Icon section](#) of this document.

3. About

The section that includes "Code, Laugh, Launch!" serves as a great introduction to your company's ethos or value proposition. It's placed after the services section, as it builds on the initial interest by deepening the narrative around your brand's uniqueness and approach.

Similar to previous cases, appropriate text and icon can be found and replaced to match your imagination of resulting site.

```
<div  
  data-aos="zoom-out"  
  class="w-full md:w-5/12 px-4 mr-auto ml-auto"  
>  
  <div  
    class="text-gray-600 p-3 text-center inline-flex items-center justify-center w-16 h-16 mb-2">  
    <Icon name="mdi:account-supervisor" size="32" />  ICON  
  </div>  
  <h2 class="text-white text-3xl mb-2 font-semibold leading-normal">  
    Code, Laugh, Launch!  
  </h2>  
  <p  
    class="text-lg font-light leading-relaxed mt-4 mb-4 text-gray-200">  
    Elevate your app game with a sprinkle of our coding magic and a  
    whole lot of fun  
  </p>  
  <p  
    class="text-lg font-light leading-relaxed mt-0 mb-4 text-gray-200">  
    Say goodbye to coding blues; with us, it's all smooth sailing (and  
    maybe some pizza)!  
  </p>  
  <a  
    aria-label="Check GitHub profile"  
    href="https://github.com/modbender"  
    class="font-bold text-gray-300 mt-8"  
    target="_blank"  
  >  
    <Icon class="mb-1" name="mdi:external-link" size="16" />  ICON  
    Check my GitHub profile  
  </a>  
</div>
```

```
<div class="w-full md:w-4/12 px-4 mr-auto ml-auto mt-10">
  <div data-aos="fade-left" class="relative flex flex-col min-w-0 break-words bg-white w-full mb-6 shadow-lg shape-clip rounded-lg h-96">
    <NuxtImg alt="Top Notch Services" src="https://cdn.pixabay.com/photo/2023/02/09/18/42/podcast-7779510_1280.png" class="w-full align-middle rounded-t-lg" sizes="300px md:400px lg:500px" width="1280" height="961" loading="lazy" format="webp" quality="80" />
    <div class="bg-pink-600 rounded-b-lg">
      <blockquote class="relative p-8 mb-4">
        <svg
          preserveAspectRatio="none"
          xmlns="http://www.w3.org/2000/svg"
          viewBox="0 0 583 95"
          class="absolute left-0 w-full block"
          style="height: 95px; top: -94px">
          <polygon
            points="-30,95 583,95 583,65"
            class="text-pink-600 fill-current"/>
        </svg>
        <h2 class="text-xl font-bold text-white">
          Top Notch Services
        </h2>
        <p class="text-md font-light mt-2 text-white">
          Instant services that will make you want to come again!
        </p>
      </blockquote>
    </div>
  </div>
</div>
```

The diagram illustrates the mapping from the image's physical dimensions to its presentation. On the left, a red arrow points from the 'width' and 'height' attributes of the NuxtImg component to the text 'IMAGE WIDTH & HEIGHT'. On the right, another red arrow points from the resulting image to the text 'IMAGE'.

Remember to keep image width and height matching the image in URL.

4. Portfolio or Success Stories

The "Skyrocketing Success" section, which showcases your accomplishments or portfolio, is logically placed after explaining your services and value proposition. It provides concrete examples of your capabilities and success.

Skyrocketing Success

Dive into our toolbox of innovation with pre-built pages that launch your project at warp speed. Customize a bit or a lot, and boom - you're on the launchpad, ready for liftoff!

5. Team

The "Here are our heroes" section, which shows the major team members involved in developing the company to what it's today (for teams) or you can make it into your portfolio.

```
<div  
  data-aos="fade-down"  
  class="flex flex-wrap justify-center text-center mb-16 lg:mb-24"  
>  
  <div class="w-full lg:w-6/12 px-4">  
    <h2 class="text-4xl font-extrabold">Here are our heroes</h2>  
    <p class="text-lg leading-relaxed font-semibold m-4 text-gray-300">  
      These heroes made this template possible  
    </p>  
  </div>  
</div>
```

You can replace the text "Me" with the names of team members and positions below the name.

For social links each button can be copied and/or modified to fit your needs.

```
<div  
  data-aos="fade-down"  
  class="w-full md:w-6/12 lg:w-3/12 lg:mb-0 mb-12 px-4"  
>  
  <div class="px-6">  
    <NuxtImg  
      alt="Me"  
      src="https://cdn.pixabay.com/photo/2016/12/07/21/01/cartoon-1890438_1280.jpg"  
      class="shadow-lg rounded-full mx-auto max-w-32"  
      sizes="120px"  
      width="128"  
      height="116"  
      loading="lazy"  
      format="webp"  
      quality="80"  
    />  
    <div class="pt-6 text-center">  
      <div class="text-xl font-bold">Me</div>  
      <p class="mt-1 text-sm text-gray-300 uppercase font-semibold">  
        UI/UX Designer  
      </p>  
      <div class="mt-6">  
        <ButtonSocial social="github" href="#" />  
        <ButtonSocial social="twitter" href="#" />  
        <ButtonSocial social="instagram" href="#" />  
      </div>  
    </div>  
  </div>  
</div>
```

IMAGE

WIDTH & HEIGHT

REUSABLE SOCIAL BUTTONS

6. Testimonials

Following the success stories, the testimonials section featuring a quote from "Name, Position" is well placed. Testimonials serve as social proof, reinforcing the credibility built up in the previous sections.

Testimonial data is placed in JSON file for easier use and modification.

The file path is /data/testimonials.json.

The data is in format of an array of individual objects. Each having attributes like "**testimonial**", "**profile**" (**name**, **position**, **image**).

```
[{"testimonial": "This team transformed our digital presence with their exceptional skills. The proj", "profile": {"name": "Alex Johnson", "position": "CTO at InnovateTech", "image": "https://images.unsplash.com/photo-1544723795-3fb6469f5b39?ixlib=rb-1.2.1&auto=format&f"}, }]
```

Simply replace the values (ex. "**Alex Johnson**") without editing the overall format or keys. It's fine to edit everything if you know what you are doing.

The testimonial data is displayed using [Swiper Slider - Nuxt Plugin](#).

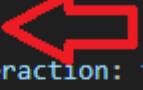

The Swiper slider is loaded dynamically using [Lazy](#) prefix for component. By doing this, when a visitor comes to the site - the slider which is usually out of view is loaded on client side to prevent any slowdown in loading time.

The slider is already configured to automatically play (autoplay) all sliders with 3000 milliseconds (3 seconds) delay.

```
<LazySwiper
  v-if="!!testimonialData && testimonialData.length > 0"
  class="testimonial-swiper"
  :modules="[SwiperAutoplay, SwiperPagination]"
